Experiment No. 04

Experiment Name: Write a prolog program for advance arithmetic.

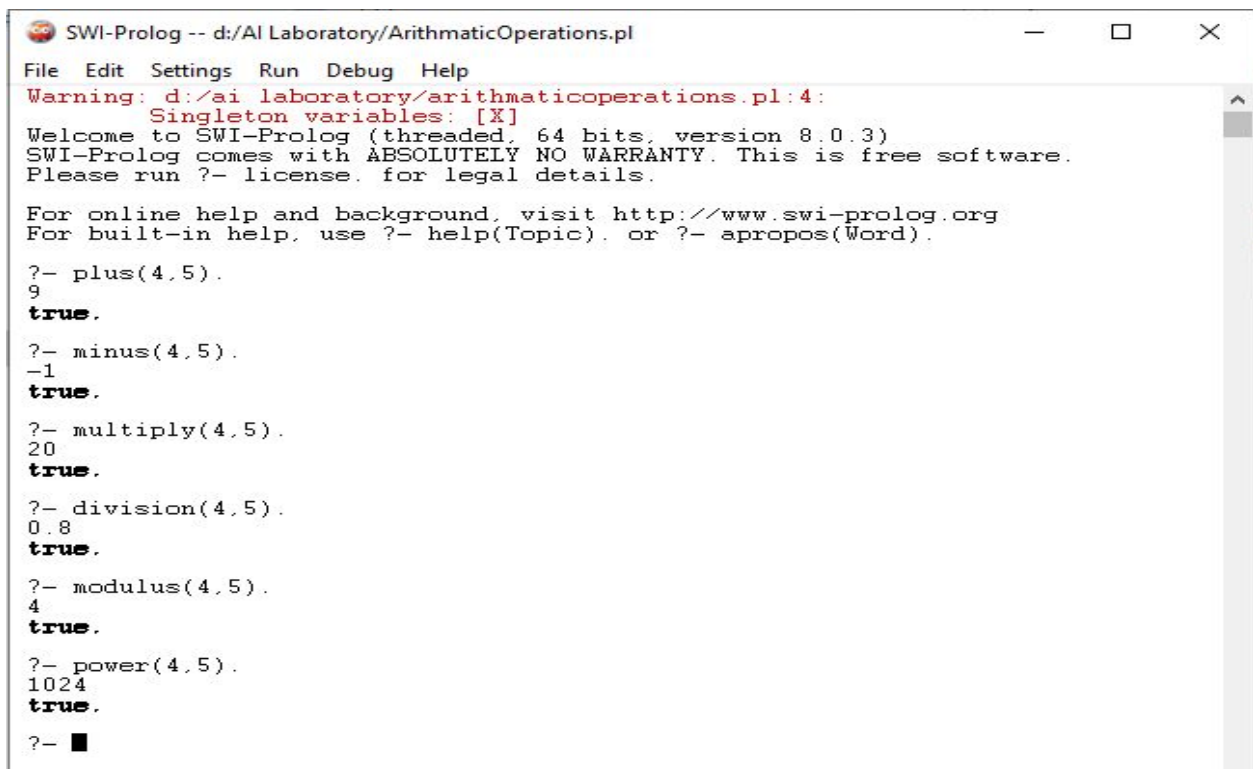

Prolog Code advance arithmetic:

The screenshot shows a Sublime Text editor window titled "D:\AI Laboratory\ArithmeticOperations.pl - Sublime Text (UNREGISTERED)". The menu bar includes File, Edit, Selection, Find, View, Goto, Tools, Project, Preferences, and Help. The editor displays the following Prolog code in a dark theme:

```
1 plus(X, Y) :- S is X + Y, write(S).
2 minus(X, Y) :- S is X - Y, write(S).
3 multiply(X, Y) :- S is X * Y, write(S).
4 division(X, 0) :- write("divide by zero").
5 division(X, Y) :- S is X / Y, write(S).
6 modulus(X, Y) :- S is X mod Y, write(S).
7 power(X, Y) :- S is X ^ Y, write(S).
```

Figure 01: Prolog Code

The screenshot shows the SWI-Prolog interpreter window titled "SWI-Prolog -- d:/AI Laboratory/ArithmeticOperations.pl". The menu bar includes File, Edit, Settings, Run, Debug, and Help. The output shows a warning about singleton variables, followed by a welcome message and instructions. The user has entered several queries, and the interpreter has returned the results:

```
Warning: d:/ai laboratory/arithmeticoperations.pl:4:
Singleton variables: [X]
Welcome to SWI-Prolog (threaded, 64 bits, version 8.0.3)
SWI-Prolog comes with ABSOLUTELY NO WARRANTY. This is free software.

Figure 02: Result

Prolog Code travelling salesman :

```
road(savar,mirpur, 10).
road(mirpur,savar, 10).
road(savar,gabtolli, 6).
road(gabtolli,savar, 6).
road(gabtolli,mirpur, 3).
road(mirpur,gabtolli, 3).
road(shahbag,mirpur, 3).
road(mirpur,shahbag, 3).
road(farmgate,mirpur, 1).
road(mirpur,farmgate, 1).
road(farmgate,shahbag, 1).
road(shahbag,farmgate, 1).
road(farmgate,shaymoli, 9).
road(shaymoli,farmgate, 9).
road(gabtolli,shaymoli, 6).
road(shaymoli,gabtolli, 6).
road(motijhil,shaymoli, 4).
road(shaymoli,motijhil, 4).
road(motijhil,shahbag, 8).
road(shahbag,motijhil, 8).

get_road(Start, End, Visited, Result) :-
    get_road(Start, End, [Start], 0, Visited, Result).

get_road(Start, End, Waypoints, DistanceAcc, Visited, TotalDistance) :-
    road(Start, End, Distance),
    reverse([End|Waypoints], Visited),
    TotalDistance is DistanceAcc + Distance.

get_road(Start, End, Waypoints, DistanceAcc, Visited, TotalDistance) :-
    road(Start, Waypoint, Distance),
    \+ member(Waypoint, Waypoints),
    NewDistanceAcc is DistanceAcc + Distance,
    get_road(Waypoint, End, [Waypoint|Waypoints], NewDistanceAcc, Visited, TotalDistance).
```
